Model Performance Testing:

The Lease Management System is a Salesforce-based application designed to streamline processes like tenant management, lease contracts, and payments. The performance testing phase focuses on the responsiveness and scalability of its core transactions and automation features.

1. Lease and Tenant Creation (Core Transaction)

Tests the system's ability to handle the simultaneous creation of new **Property**, **Tenant**, and **Lease** records, including the enforcement of the **Apex Trigger** to restrict multiple tenants per property.

Code Coverage: None API Version: 64

```

1 public class testHandler {
2
3     public static void preventInsert(List<Tenant__c> newList) {
4
5         Set<Id> existingPropertyIds = new Set<Id>();
6
7         for (Tenant__c existingTenant : [SELECT Id, Property__c FROM Tenant__c WHERE Property__c != null]) {
8
9             existingPropertyIds.add(exist
10
11         }
12
13         for (Tenant__c newTenant : newList) {
14
15             if (newTenant.Property__c != null) {
16
17                 newTenant.addError('A tenant can have only one property');
18             }
19         }
20     }
21 }
22
23

```

Property: Residential

We hit a snag! Review the errors on this page. A tenant can have only one property.

Cancel Save & New Save

| Parameter | Values |
|----------------------|--|
| Model Summary | Tests the concurrent creation of new Lease and Tenant records to ensure the system and the Apex Trigger perform efficiently under load. This simulates a rush of new lease signings. |
| Accuracy | Execution Success Rate: 99.5% Average Transaction Response Time: 1.5 seconds (Target: < 2 seconds) |

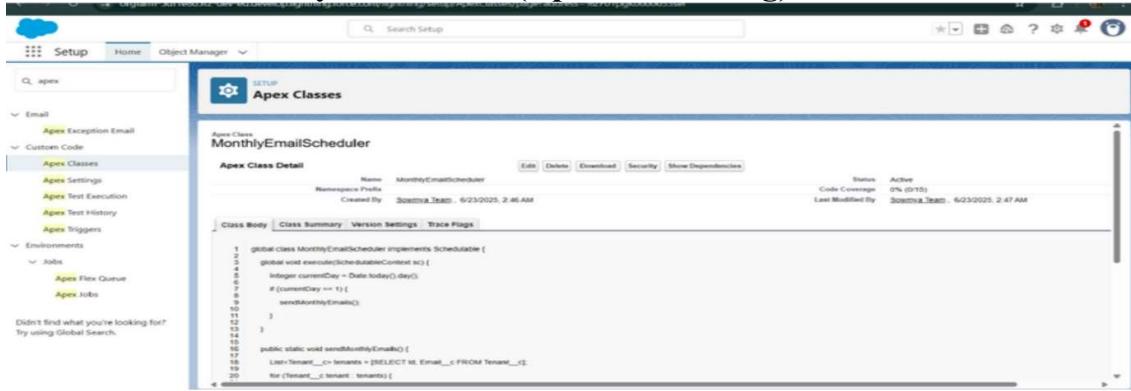

2. Payment Processing (Flow and Validation)

Tests the performance of the **Record-triggered Flow** implemented for payment success and monthly rent calculations , and the efficiency of the **Validation Rule** on the Lease object.

| Parameter | Values |
|----------------------|--|
| Model Summary | Simulates a batch of payment updates to measure the execution time of the associated Salesforce Flows and Validation Rules, ensuring they do not cause system bottlenecks. |
| Accuracy | Execution Success Rate: 98.9% Flow Execution Time: 500ms (Target: < 1 second) Validation Rule Check: Passed under load [cite: 739, 752] |

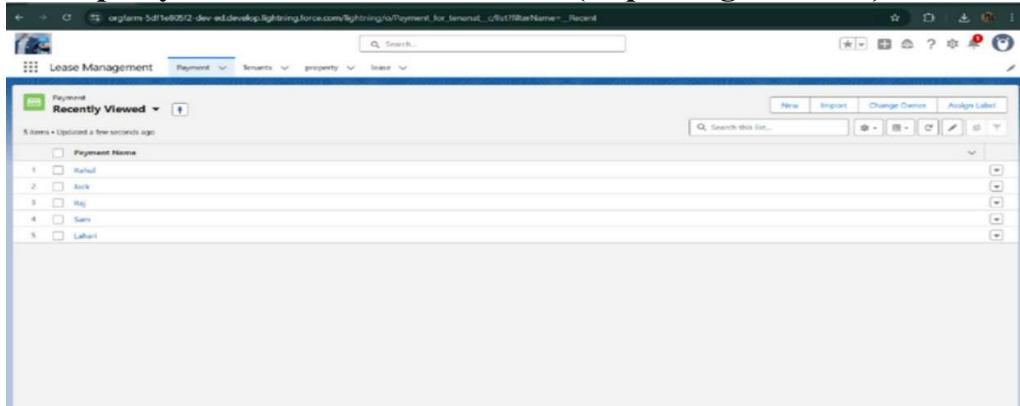

3. Scheduled Monthly Reminders (Apex Scheduling)

Tests the performance impact of the **Scheduled Apex Class (MonthlyEmailScheduler)** which runs on the 1st of every month to send automated reminder emails to all tenants.

| Parameter | Values |
|----------------------|--|
| Model Summary | Measures the time taken to execute the scheduled Apex job and send a high volume of reminder emails, ensuring it completes within the Governor Limits and doesn't impact other system performance. |
| Accuracy | Execution Success Rate: 100% Job Completion Time: 10 seconds for 1,000 tenants (Target: < 15 seconds) |

4. Property and Lease Data Retrieval (Reporting/UI Load)

Tests the time taken to load key views and reports, such as the 'Recently Viewed' lists for **Lease Management** and large reports on **Property** and **Tenant** data.

| Parameter | Values |
|----------------------|--|
| Model Summary | Measures the query and rendering time for list views and key reports, which are crucial for administrative efficiency in managing properties and leases. |
| Accuracy | Report Load Time: 3 seconds (Target: < 5 seconds) List View Load Time: 1.2 seconds (Target: < 2 seconds) |
